5th Eucchem Conference on Stereochemistry Bürgenstock, May 4 - 10, 1969

President: **Anders Kjær**

	MONDAY – Moderator: P Pino
H G Khorana	Current work on the total synthesis of genes for transfer ribonucleic acids
H Felkin	Some reactions involving allylic alcohols
E Wenkert	The quaternary carbon atom
	TUESDAY – Moderator: P von R Schleyer
S Lifson	A consistent force field for calculation of conformations and vibrational spectra of molecules
	<i>Group discussion:</i> Molecular energies
A Dreiding	Proposal of a new combinatorial graph theory based on chirality and some applications in stereochemistry
	WEDNESDAY – Moderator: O Wintersteiner
R U Lemieux	Solvation effects on conformational equilibria
N K Kochetkov	Stereospecific synthesis of polysaccharides via sugar orthoesters
	THURSDAY – Moderator: K A Jensen
F H Westheimer	Pseudorotation in the hydrolysis of phosphate esters
	FRIDAY – Moderator: J F Oth
J W Cornforth	The chiral methyl group
