7th Euchem Conference on Stereochemistry Bürgenstock, May 2 - 8, 1971

President: **Hans Musso**

Jack E Baldwin	MONDAY – Moderator: R H Martin
W Roth	Rearrangements of dipolar species
H E Simmons	Stereochemistry of non-concerted reactions
	Macrocyclic molecules
W Simon	TUESDAY – Moderator: J M Lehn
R Winkler	Alkali cation specificity of biological systems, model compounds and model membranes
M Eigen	Kinetics and mechanisms of alkali ion carriers
	Evolution of biological macromolecules
W H Pirkle	WEDNESDAY – Moderator: J F M Oth
H Fischer	The use of chiral NMR solvents to determine optical purities and absolute configurations
	Chemically induced dynamic nuclear polarization during some thermal and photochemical radical reactions
G Stork	THURSDAY – Moderator: J M Robertson
E Winterfeldt	Epoxynitrile cyclizations and related matters
A Eschenmoser	Stereochemische Aspekte der Geissoschizin Synthese
	The B ₁₂ -problem
J M Conia	FRIDAY – Moderator: G Chiurdoglu
J K Sutherland	Some aspects of the thermal cyclization of unsaturated carbonyl compounds
G Olah	The cyclization of medium ring olefins
	The general concept and new aspects of electrophilic reactions involving carbocations
