### 10th Euechem Conference on Stereochemistry Bürgenstock, May 5 - 11, 1974

President: **Jean-Marie Lehn**

	MONDAY – Moderator: <b>M Simonetta</b>
<b>H B Bürgi</b>	Stereochemistry of reaction paths
<b>D L Bunker</b>	Simple reaction stereochemistry via computer experiments
<b>M Karplus</b>	Structure and function of hemoglobin
<b>E Ruch</b>	Chirality in chemistry
	TUESDAY – Moderator: <b>G Schwarzenbach</b>
<b>R Corriu</b>	New results concerning the mechanism of the nucleophilic substitution on silicon atom
<b>N Kornblum</b>	Substitution and elimination reactions which proceed via radical anion intermediates
<b>M L H Green</b>	Aspects of the use of organo-transition metal compounds as reagents for organic synthesis
	WEDNESDAY – Moderator: <b>K Bloch</b>
<b>J P Changeux</b>	A study on the mode of action of acetyl-choline at the molecular level
<b>W S Johnson</b>	Recent developments in non-enzymic biogenetic-like olefinic cyclization
	THURSDAY – Moderator: <b>J Dale</b>
<b>F Sondheimer</b>	Some aspects of annulene chemistry
<b>P E Eaton</b>	The [n.2.2] propellanes
<b>O Chapman</b>	Low temperature photochemistry
	FRIDAY – Moderator: <b>W N Lipscomb</b>
<b>J R Knowles</b>	A perfect enzyme
<b>R Huber</b>	The trypsin-trypsin inhibitor complex; an example of very strong and specific protein-protein interaction
<b>H Kuhn</b>	A model of selforganization of molecular systems
